

**1.**

Our team addressed previous feedback by rebuilding the frontend using React with TypeScript and Vite. We transitioned all UI elements to shadcn/ui for better consistency and design. Additionally, we reorganized parts of the project structure to improve maintainability and scalability going forward.

**2.**

I worked on adding login and signup functionality to the frontend. I attempted to integrate Auth0 directly with our custom form but faced challenges avoiding the default redirect flow. While it's achievable, it requires additional time and effort to fully implement a seamless user experience.

**3.**

I thoroughly reviewed the updated frontend and tested its functionality across different components. This helped ensure that the redesign is responsive, consistent, and free of major bugs.
